Primary Client: President of Community Bank

President of Community bank has expertise on balance scorecards

Audience tier (Ordered by highest priority stakeholder to lowest):

- Board
- L1: “leadership one”, executive management
    - Prefers simple visuals with quick insights rather than information overload
    - Answers the why?
        - What do you know about X bank?
        - What does X bank need to be more efficient?
    - Executives are looking for asset based strategic planning rather than deficit-based planning
    - Executives only need to see aggregates of transactions (e.g. total activation, total usage of those activations, total declines of transactions)
- L2: department leads, compliance leads
    - Boots on the ground employees
- L3

Software: Executive Dashboards are currently done in Microsoft PowerBI using features like power automate.

Key Insights for Community Banks:

- Top priority: Monitoring loans and deposits (total deposit amounts, total loan amounts, etc.)
- Staffing
- Flagging transaction types
    - Three priorities need to be shown with transaction types:
        - Total percent of declined transactions of the bank measured against industry average
        - Total percent of declined transactions of the bank measured against peer average
        - Flag if the average of the bank is below industry or peer average (suppress if it is equal or above average)
- Branch information (traffic, staffing, location, loans and deposits per branch)
- Customer profiler (total deposits, total withdrawals, trends over time, debit transactions, TM data & details etc.)

No more than 3 drill downs (ordered by highest priority to lowest priority):

- Main dashboard: percent totals (loans, deposits, etc)
- Drill down: top offenders
- Drill down: customer snapshot

Would love to know:

- Who is warehousing
- What payment rails are getting utilized
- Who is carrying balances
    - Needs to track Realtime person to person transactions
- Utilize householding information (i.e. customer relations, family accounts, etc)

Cool to have

- Tracking flags over time to assess impact

Ultimate Bank Goal: the bank needs insights on how to capitalize on all this

Ultimate Goal of Data Science team: create a reporting framework to handle dashboarding demands long term. Steps:

- Utilize balanced scorecards.
- Build user interface.
- Have users input objectives
- Dashboard builds out objective monitoring dashboard that answers how am I am trending against my objective?
